

Test Strategy/Approach: Scenario-based Testing

Test 1: Positive interview answers (pass)

Test 2: Negative interview answers (fail)

Test 3: Not understandable interviewee questions responses

Chatbot displays conversation

User is able to answer interview questions

connect to the backend for questions

Test Plan:

We plan on executing our test strategy by taking the position as the interviewee and first, trying to access the website, second logging into the interview, and third interacting with the interview bot and analyzing if the interviewee is able to respond, if the bot responses correctly and if the bot overall functions as it should.
